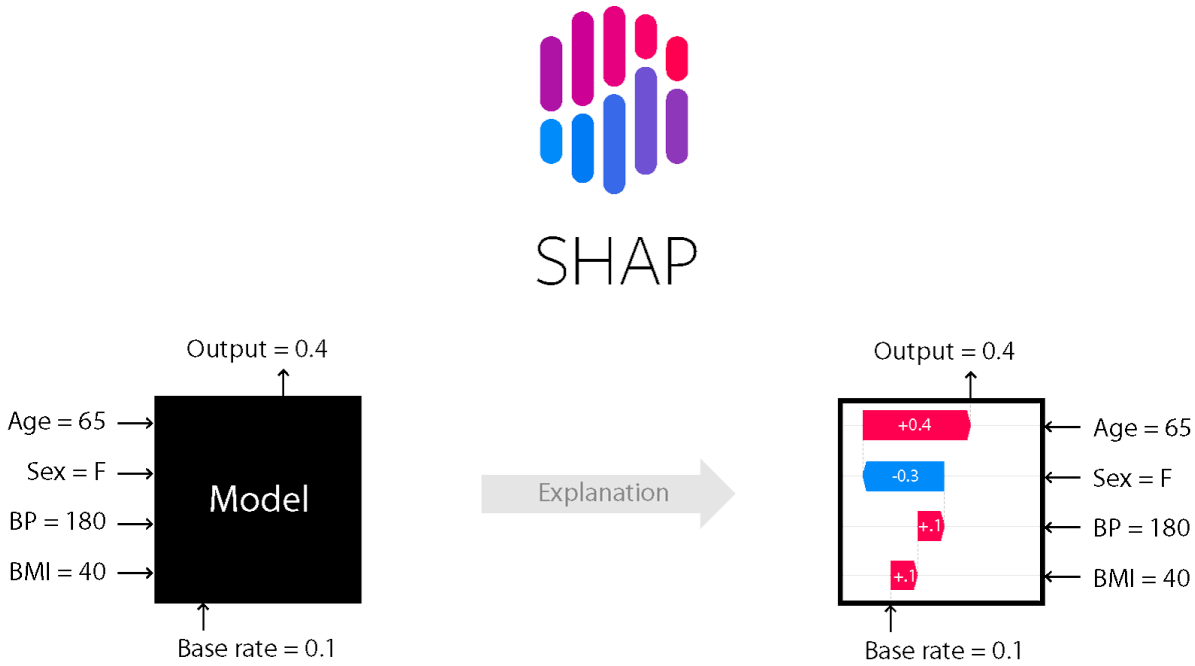
Welcome to the SHAP documentation



SHAP (SHapley Additive exPlanations) is a game theoretic approach to explain the output of any machine learning model. It connects optimal credit allocation with local explanations using the classic Shapley values from game theory and their related extensions (see papers for details and citations).

Install

SHAP can be installed from either PyPI or conda-forge:

```
pip install shap
or
conda install -c conda-forge shap
```

Contents

- Topical overviews
  - An introduction to explainable AI with Shapley values
  - Be careful when interpreting predictive models in search of causal insights
  - Explaining quantitative measures of fairness
- Tabular examples
  - Tree-based models

    - Linear models
    - Neural networks
    - Model agnostic
- Text examples
    - Sentiment analysis
    - Translation
    - Text generation
    - Summarization
- Image examples
    - Image classification
    - Image captioning
- Genomic examples
    - Compute importance scores
- Benchmarks
- API reference
    - Explanation
    - explainers
    - plots
    - maskers
    - models
    - utils
    - datasets
- API examples
    - explainers
    - maskers
    - models
    - plots
