

Basic properties of probability measure

The impossible event

What can be said about the probability of the empty set?

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

* Intersection: $A \cap B = \Omega \cap \emptyset = \emptyset$.

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

- * Intersection: $A \cap B = \Omega \cap \emptyset = \emptyset$.
- * Union: $A \cup B = \Omega \cup \emptyset = \Omega$.

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

- * Intersection: $A \cap B = \Omega \cap \emptyset = \emptyset$.
- * Union: $A \cup B = \Omega \cup \emptyset = \Omega$.

normalisation

$$1 = \mathbf{P}(\Omega)$$

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

- * Intersection: $A \cap B = \Omega \cap \emptyset = \emptyset$.
- * Union: $A \cup B = \Omega \cup \emptyset = \Omega$.

normalisation

$$1 = \mathbf{P}(\Omega) = \mathbf{P}(\Omega \cup \emptyset)$$

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

- * Intersection: $A \cap B = \Omega \cap \emptyset = \emptyset$.
- * Union: $A \cup B = \Omega \cup \emptyset = \Omega$.

normalisation

additivity

$$1 = \mathbf{P}(\Omega) = \mathbf{P}(\Omega \cup \emptyset) = \mathbf{P}(\Omega) + \mathbf{P}(\emptyset)$$

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

- * Intersection: $A \cap B = \Omega \cap \emptyset = \emptyset$.
- * Union: $A \cup B = \Omega \cup \emptyset = \Omega$.

normalisation

additivity

normalisation

$$1 = \mathbf{P}(\Omega) = \mathbf{P}(\Omega \cup \emptyset) = \mathbf{P}(\Omega) + \mathbf{P}(\emptyset) = 1 + \mathbf{P}(\emptyset)$$

The impossible event

What can be said about the probability of the empty set?

Identify $A = \Omega$ and $B = \emptyset$.

- * Intersection: $A \cap B = \Omega \cap \emptyset = \emptyset$.
- * Union: $A \cup B = \Omega \cup \emptyset = \Omega$.

normalisation

additivity

normalisation

$$1 = \mathbf{P}(\Omega) = \mathbf{P}(\Omega \cup \emptyset) = \mathbf{P}(\Omega) + \mathbf{P}(\emptyset) = 1 + \mathbf{P}(\emptyset)$$

$$\mathbf{P}(\emptyset) = 0$$
