Android Studio can't find my device

When i try to compile on Android Studio i got this message:

USB device not found

My phone is a HTC one X with CyanogenMod 10.1.3-RC2

- i have HTC Sync Manager V2.1.77.0 installed but when i try to connect my HTC my computer didnt recognize my Phone
- The USB Debug is Check
- When i type adb devices i got no device.
- in device Manager on windows The Android USB Devices is recognize

 enter image description here

- I have already try to adb kill-server then adb start-server and a adb devices but this didn't work

someone have any advice ?

Thanks a lot.

 android  adb  android-studio  htc

After you installed CM, you likely no longer had an HTC VID & PID, so the HTC driver would be of no use. See Ryu's answer below. – [Chris Stratton](#) Sep 25 '13 at 16:04

I found a solution for this,

find the id of your device in the device manager

like USB\VID_XXXXPID_0CD6&REV_XXXX&MI_00

and add this to your android_winusb.inf (sdk\extras\google\usb_driver)

like this:

[Google.NTx86]

```
;YOUR PHONE NAME
%SingleAdbInterface% = USB_Install, USB\VID_XXXXPID_XXXX&REV_XXXX&MI_00
%CompositeAdbInterface% = USB_Install, USB\VID_XXXX&PID_XXXX&MI_00
```

[Google.NTamd64]

```
;YOUR PHONE NAME
%SingleAdbInterface% = USB_Install, USB\VID_XXXXPID_XXXX&REV_XXXX&MI_00
%CompositeAdbInterface% = USB_Install, USB\VID_XXXX&PID_XXXX&MI_00
```

And try to reinstall with right click update the driver.

Thank you very much for this solution. – [Kamil Szot](#) Dec 22 '13 at 17:56

1 This didn't work for me on Win8.1, but it did trigger a solution. First I got an error about 'possible corruption' of the .inf file. So I backed out the changes, and reinstalled anyway (by right-click on the .inf file). I then noticed an "Android Composite ADB Interface" item in device manager (don't think it had been there before). After that I ran Android Studio and started a debug session, and it detected my Nexus 7. – [codah](#) May 19 '14 at 2:51

1 Where I can find the device manager? – [Filipe](#) May 20 '14 at 13:55

Device manager: right-click on Computer -> manage and in the window that appears Device Manager on

the left. Right-click on the device and go to `properties` . In the new window go to `Details` and change the pull down menu to `Hardware Ids` . The two values need to be copied out. – [User](#) Sep 4 '14 at 8:59

I faced this problem on a Samsung Galaxy. I uninstalled the device driver and re-installed it, it was able to detect. Another time, installing Samsung Kies software helped. You might want to find out the analogous for that.

didn't change anything, I've just see another devices with the important sign (Yellow Triangle) in another devices with the name of HTC but i don't know how to install this, i've try with the `'sdk\extras\google\usb_driver'` but he can't find the driver :/ – [Ryu](#) Sep 24 '13 at 19:08

Although my computer could recognise my phone, I had to install the official drivers from the Samsung developer site to get adb/Android Studio to recognise it:
