page 2 legend: lines instead of dots

BB **Ben Bonset**

11 days ago

Hi everybody!

Can anyone please advise me on how to get a legend with lines instead of dots on page 2.

I guess it works by setting color in aes for geom_smooth() and somehow suppressing the legend for geom_point()... still, I was not able to figure that one out. Any suggestion or hint is much appreciated.

I don't have a good answer for this, but it's such a small point, I cannot imagine it causing any problem for the purpose of this assignment. I wouldn't sweat it.
