A place for learning about online education

Five-step Strategy for Student Success with Online Learning

SEPTEMBER 28, 2012 SEPTEMBER 14, 2015 ~ DEBBIE MORRISON

Students that are enthusiastic about online learning cite numerous reasons for preferring the virtual format, yet it's *flexibility* that is extolled most often – the ability to study and learn on 'my time'. Ironically, it is this convenience factor that can cause some online students to procrastinate, or worse fail to engage in the learning process at all, which often leads to students dropping out or performing poorly.

As discussed in previous posts, a key factor to student success in the online environment is self-direction, *the capability and willingness to direct one's own education*. Online students, more so than traditional students, need to be independent and take responsibility for their learning. Self-directed learning involves a specific skill set: organization, motivation, and a sense of confidence.

The question—can online students 'learn' to be self-directed, or is self-direction innate? Most educators would agree there is an element of both at play. Intrinsic motivation is needed for learners of any age in any situation, though for the most part self-direction competencies can be learned, that is specific behaviours can be practiced and implemented. In this post I write for two sets of readers, first for online students. I've included a five-step strategy that includes a set of behaviours 'real' students have identified as crucial to their success in completing online college courses for credit. For educators, I've included a set of suggestions, actions that support students in becoming self-directed learners, one of which involves giving the responsibility to the learner, a critical component in the instructor-learner relationship.

Five-step Success Strategy for Students

I've customized the following strategy based on three credible sources of 'real' online students: 1) a student body of online learners at a four-year college (my workplace), 2) a group of successful online students from a study '*How Students Develop Online Learning Skills* (<http://www.educause.edu/ero/article/how-students-develop-online-learning-skills>)' and, 3) from my experience as an online student.

Step One: Read the syllabus. The syllabus is a critical resource for any course. It is the road map or 'game plan' for the entire course—get to know it well. Print a copy on the first day of class, read through it *twice*. At the same time highlight, then record the due dates for assignments and threaded discussions in your personal calendar. If you need reminders, add those too. Once the course gets going, review assignment instructions, discussion topics, etc. at the beginning of *each week* and consult grading guidelines and check due dates [again]. You'll be amazed how much easier assignments become once you are [very] familiar with the instructions.

Online Student: *"I had work and family responsibilities when I took online courses – life would get crazy! After the first course when I missed the due dates for assignments one too many times, I was determined not to get behind again. The most effective method for me was to enter the due dates in my calendar. I was then able to get a handle on what was due when."*

A note about due dates: if you know it will be impossible to submit an assignment by the due date because of an urgent life situation (illness, work disaster, etc.), contact your instructor as soon as possible, **before** the assignment is due. You will get far more consideration from the instructor by contacting him or her before rather than after-the-fact.

(https://onlinelearninginsights.files.wordpress.com/2012/09/4518776596_27269edd7b_z.jpg) **Step Two: Plan weekly study times.** Studying, participating in forums and completing assignments in an online class can be challenging, even more so when juggling multiple responsibilities. Time management is vital for online students. Planning a regular study time, blocking off set times each week is what successful online students do most often. According to the study referenced in this post, 79% of students identified this method of managing their time as critical to their success (Roper, 2007). Plan a schedule and stick to it.

Online Student: *"Setting and staying to specific study days was one factor that worked for me. For example, in the evenings throughout the week, I read the lessons. Weekends were generally reserved for working on assignments. Saturdays were also devoted to online postings and building on what I had submitted."*

Step Three: Log onto the course home a minimum three times per week.

Logging onto the course home page consistently each week is associated with higher grades for students according to several studies on online student behavior. Get into the habit of checking in consistently, even daily, to read discussion posts, check for instructor announcements and/or review course materials. While you are logged on, get involved and be an active participant in discussions. Though threaded discussions may appear daunting when you first get started, *everyone* has something of value to contribute. By logging on consistently each week, reading and responding to classmate postings, you will begin to feel part of a community, and enhance your learning experience at the same time.

Online Student: *"The experience was greatly enriched by the relationships and interaction with my fellow students. It amazes me how well we got to know each other even though we were often thousands of miles apart and were only virtual classmates. I learned as much from other students as I did from the instructors."*

Step Four: Ask questions. Instructors want to help, they want students to be successful and expect students to ask questions. When I work with course instructors this is one complaint that is expressed most often about online students, *'why don't they ask?'* The virtual space in online learning can be a barrier, **if** you let it get in the way. If you have a question about course content, need clarification on a difficult concept – ask. And when you *do* ask a question, make it count. Before you post a question, know *what* you are asking and *why*. Be clear and concise in your communication. You'll be glad you asked!

Step Five: Make connections with fellow students. Connecting with online classmates and building a learning community is easier than you might think given all of the social tools and applications available today. Reach out to one student, send an email to ask a question, or create a Facebook group for your class, even create a small study group. If assigned to a group project, try Google Docs, which is a terrific collaborative tool, and while in Google, try Google+ Hangouts, (<http://support.google.com/plus/bin/answer.py?hl=en&answer=1215275>), an application that allows you to video chat and discuss in real time, even share documents and Web pages.

(https://onlinelearninginsights.files.wordpress.com/2012/09/google-plus-hangouts-20120111_01-1.jpg).

To all online students: I encourage you to apply and try-out at least one of the five suggestions outlined here. Though there is no perfect strategy that guarantees online success, trying at least one strategy is better than no strategy. The critical factor in online learning success is your role as the learner – the learning experience is what **you** make of it. Be an active participant, ask questions and enjoy the opportunities that learning provides.

Recommendations for Educators

Educators have a role in students' self-directed learning too, and that is to *give* the learner the responsibility of learning, expect success and be there. Below are a few suggestions:

- Outline expectations for students thoroughly, By articulating expectations and the role of the student in the course, we 'give' the student the responsibility.
- Expect questions in the first two weeks of the course. This is the 'syllabus blues' phase. Students require more support during this phase than any other. See my post [here \(http://wp.me/p1N30w-11C\)](http://wp.me/p1N30w-11C) that describes this phase in detail.
- Respond promptly to student questions. The twenty-four hour rule is a good benchmark.
- Don't expect students to know *how* to be self-directed, they may need to develop this skill set. Direct students to resources that support students in developing their *self-direction* skills. Many higher education institutions provide excellent resources for online students. Find out if your school offers these resources, and inform your students about them. If not, consider including a list of resources in your syllabus for students. Below are a few excellent examples:

[Tips for Success in Online Learning](http://ecampus.boisestate.edu/students/support/tips-for-success/), (<http://ecampus.boisestate.edu/students/support/tips-for-success/>). Boise State University

Online Study Skills Workshop

(http://www.ucc.vt.edu/academic_support_students/online_study_skills_workshops/index.html), Cook Counseling Center, Virginia Tech

[Quick Start Guide for Online Students](http://www.slideshare.net/SidneyEve/quick-start-guide-for-online-students) (<http://www.slideshare.net/SidneyEve/quick-start-guide-for-online-students>), Sidneyeve Matrix, Queen's University

[Student Tips for Online Learning Success](http://www.nhcc.edu/student-resources/online-learning-d2l/tips-for-online-learning-success) (<http://www.nhcc.edu/student-resources/online-learning-d2l/tips-for-online-learning-success>), North Hennepin, Community College

Online learning has its rewards for both students and instructors, as well as its challenges as we've explored in this article. But with a sound strategy for learning, a strategy for education that is specific to the online environment, students have the opportunity to be successful online students **and** life-long learners. I very much like this quote that applies to both students and instructors, '*learning is not a spectator sport*'.

this is my second online course but my first at this level. I have done the unistart course and found that it helped me organise myself to study well. I have a designated study area where I can leave my "stuff" all over the table, I have assigned my days off to study and even designated me days so that I can relax and prepare. I have found that this has helped and I don't feel daunted by the prospect of what lays ahead. Don't be afraid to ask a question, chances are ten other people want to ask the same thing but are afraid of sounding silly. Remember to take breaks from study , don't try and do it all in one session. I printed off everything that I could so that at a later date I can pull it out and go through and make notes on it.

I am an online student just starting online studies and am pretty new with this whole online study stuff. When going through this article, i discover i have a lot to adjust. Step 2 is going to be one and i think step 5 is going to solve my problem with step 4. Okay, am new with this and i don't even know where to start. can someone please explain to me what i need to do first?

Yes it is very true. We have to use time management. I think it is very important, when it comes to self direction. You have to motivate yourself. I started two months ago. And today is my actual first day starting.

Yes I do agree with you because, when I was about to start with the online learning, I thought it will be very easy. But when started, I come to discover is not what I was thinking. I faced some challenges and when I come across the Five-Step Strategy for students, I try to use step 2 and 3 mostly because that is what I was facing (time) and self determination or discipline.

But the most important thing about online learning is, you study at your pace.

Reply

8. **Clement**

SAYS:

JUNE 23, 2017 AT 10:07 PM

To me online learning needs a high level of discipline. A student is not sitting in classroom, he has the course material and he has to study it. He will be learning at his own pace with out any immediate supervision. If he wants to be successful he has to be well organized in his time management.

I am taking an Online course for the first time. I found this article is very useful. Particularly, step two seems to be more important to me. I need to fix very specific times of a week when i can only concentrate that course, rather than other things. That is how i can complete all necessary readings, discussions and assignments.

Hello:) Thank you for the great post. I have some difficulties with online course when it comes to decide wich course to take. Everything seems so interesting. It feels i can finally learn about everything else i dont see in school (I am a medical student). I have enrolled to more than one course at the time, but it didn't went well. What does other students say about that? Does anyone else start more than one course at the time?

I often drop out of MOOCs, I enrol in lots of them, whenever I come across a subject matter which interests me. But I completed only a couple of them. The problem is, nothing depends on my finishing these courses, they would not help me find a job, and so I consider them a kind of entertainment for me. And so not something that has to be done no matter what. For instance, I love literature and history courses, and they are not exactly the most essential skills in the workplace. I cannot help being interested in what I am, though, but all the same, I treat the courses as entertainment such as tv series or games. Only more educational. But the world would not end if I fail the course or only watch the videos instead of completing all assignments. Real life and my family is more important for me than a course.

Hello, my reason for taking online courses is that I have a life elsewhere and can't move to actually attend the class that I want. Keeping this goal in mind, it's so easy to fall behind because your life continues on whether you miss an assignment, conversation, etc. Therefore, actually scheduling the time is pertinent to succeeding in any online course. Thank you.

- Great suggestions. After my first online class, I realized how valuable it was to read the syllabus, and yes agreed, twice! It is not always helpful when teachers don't follow their own syllabus, but students should at least assume they will. I think while not all students are as self directed as some, it can help to have guidelines for online learning. While my studying time is quite consistent, I find posting in the forum to

classmates is better left played by ear so to speak. I find response time in forums that lag behind can be disruptive to good conversation. Most importantly I think teachers should remember that students are going into great debt to get an education, so they should be actively involved in the online classroom as much as the student.

SAYS:

JANUARY 23, 2016 AT 10:28 PM

I could not agree with Donna more on her comment about the teachers following the syllabus as well as the students. Plus, the importance of posting early in the discussion. Well, as early as it is possible for the particular student because circumstances do happen. I was so sick when I started school I wound up in the hospital where I lost my phone and I have not had any money to replace it to date. I have so many questions I cannot ask because I do not have a phone. I posted as soon as I could lift my head off the pillow and had a due in two days. I wanted to be early for my first day of class but God had something else in store. Still I agree post as early as possible.

Hi Debbie, I was very interested in accessing the online learning resources you posted from Boise State and Nevada universities but the links appear broken. Do you perhaps have updated URLs for these? I am very keen to view additional resources that help students learn online. Regards, meg

Hi Meg, Thanks so much for giving me the heads up about the links. Much appreciated. I updated the page, though here's the links for your convenience: Boise:

<http://ecampus.boisestate.edu/students/support/tips-for-success/> and I replaced the U of Nevada resource with this one from North Hennepin, Community College <http://www.nhcc.edu/student-resources/online-learning-d2l/tips-for-online-learning-success>.

Hi Debbie,

Thanks again for another excellent blog that I was able to share with the new online profs I'm working with at our college! Your suggestions for the students will be a great help to many of these instructors who are just starting to teach in the online format. Thanks too for providing the "expert" position to back up what we try to teach them :).

I strongly encourage our profs to follow your blog...and I hope many more will do so.

Hi Andrew,

Nice to hear from you again! So glad you found the post helpful. My goal is to support instructors, and provide a virtual meeting place for instructors and educators where we can learn, share and discuss.

Thanks for sharing and commenting. 😊

The only issue I find with online learning is when the student starts falling behind due to lack of comprehension, there is little help available to him to get that insight into the course. That is the time one feels the need for a live tutor who can understand the weaknesses and gaps in knowledge of the student and guide him on.

Hi Venky. Yes falling behind due to lack of comprehension is not uncommon for online students – and the student needs help and support :). One-on-one help is an excellent way for the student to catch-up, though I do think this can be accomplished with a ‘live’ tutor as you say, but could also be accomplished through online help as well, whether in the form of a study group through <http://openstudy.com/> which is an excellent platform to find help or through a study group created through <https://piazza.com/>.

Thanks for your comment! :). What you mention is also important for course instructors to note – implement plans to help students who might be falling behind.

Hi Venky,

I also agree with the issue you have about falling behind. I also get behind sometime due to lack of comprehension, and wish I had a tutor to help me understand things. Do you sometimes need help as well? Has anyone replied to you regarding your concerns?
