

Websites for you and your projects.

Hosted directly from your [GitHub repository](#). Just edit, push, and your changes are live.

Roll vanilla, or generate a site for your project to quickly get started.

You get one site per GitHub account and organization, and unlimited project sites. Ready? Let's get started.

User or organization site

Project site

1

Create a repository

Head over to [GitHub](#) and [create a new repository](#) named `username.github.io`, where *username* is your username (or organization name) on GitHub.

If the first part of the repository doesn't exactly match your username, it

won't work, so make sure to get it right.

?

What git client are you using?

A terminal

GitHub for Windows

GitHub for Mac

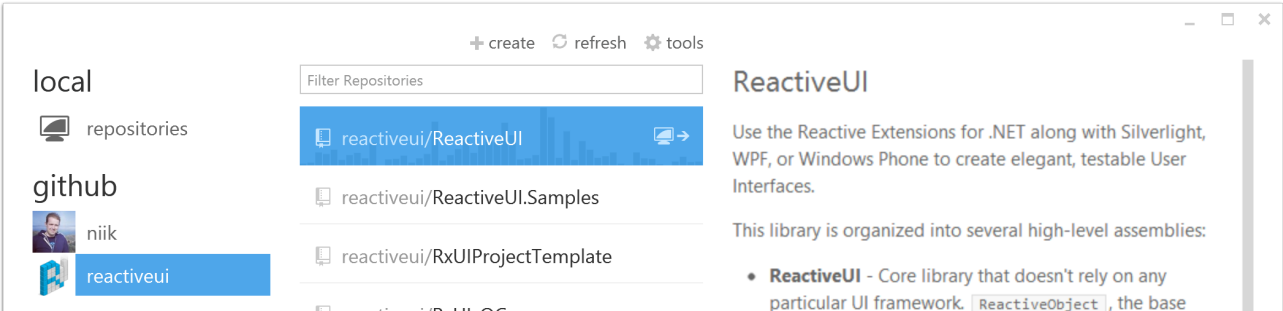

I don't know

2

Download GitHub for Windows

GitHub for Windows is a great way to use git and GitHub on Windows.

Download GitHub for Windows

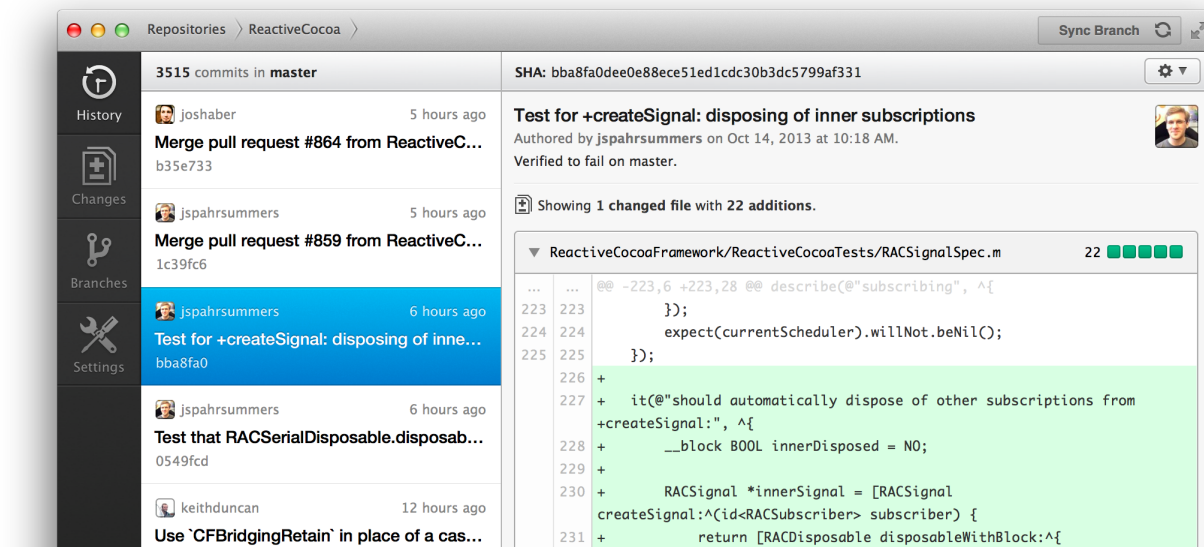

3

Download GitHub for Mac

GitHub for Mac is a great way to use git and GitHub on Mac.

Download GitHub for Mac

4

Clone the repository

Go to the folder where you want to store your project, and clone the new repository:

```
~ $ git clone https://github.com/username/username.github.io
```

5

Clone the repository

Click the green "Set up in Desktop" button. When the GitHub desktop app opens, save the project.

If the app doesn't open, launch it and clone the repository from the app.

6

Clone the repository

After finishing the installation, head back to [GitHub.com](https://github.com) and refresh the page. Click the green "Set up in Desktop" button. When the GitHub desktop app opens, save the project.

If the app doesn't open, launch it and clone the repository from the app.

7

Hello World

Enter the project folder and add an index.html file:

```
~ $ cd username.github.io
~ $ echo "Hello World" > index.html
```

8

Create an index file

Grab your favorite text editor and add an index.html file to your project:

```
index.html

<!DOCTYPE html>
<html>
<body>
<h1>Hello World</h1>
<p>I'm hosted with GitHub Pages.</p>
</body>
</html>
```

9

Push it

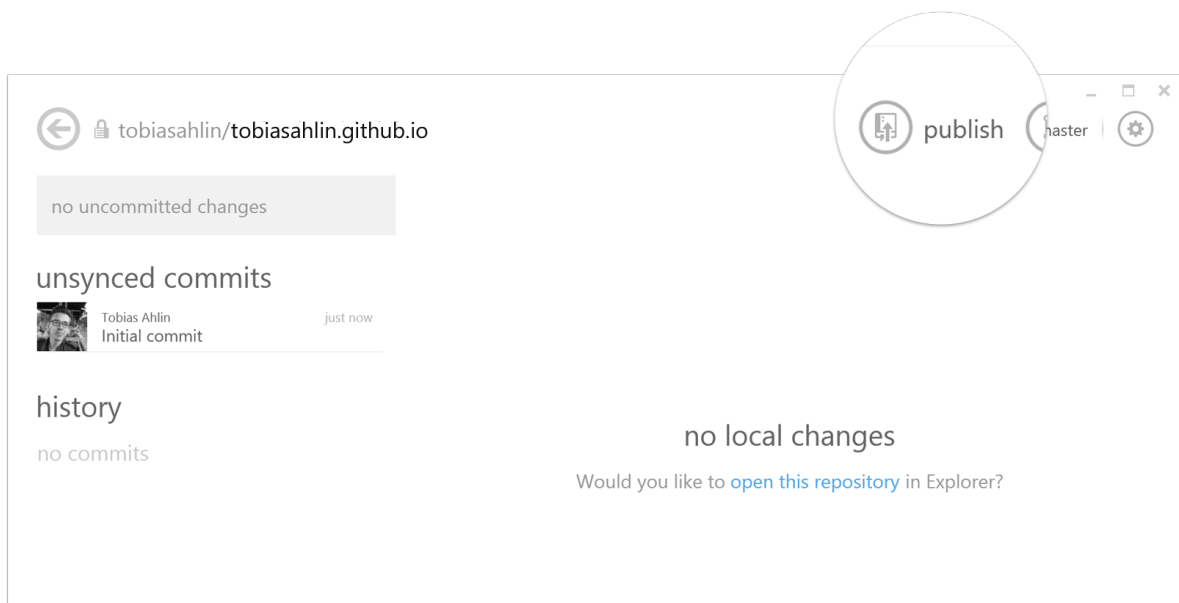

Add, commit, and push your changes:

```
~ $ git add --all
~ $ git commit -m "Initial commit"
~ $ git push
```

10

Commit & sync

Enter the repository, commit your changes, and press the sync button.

11

Commit & sync

Enter the repository, commit your changes, and press the sync button.

12

...and you're done!

Fire up a browser and go to **<http://username.github.io>**. Give it a couple of minutes for your page to show up—there will be a delay this very first time. In the future, changes will show up pretty much instantly.

Now that you're up and running, here are a few things you should know.
