# 3. Translation Alignment: Instructions

Assignment instructions:

- You are free to use any programming language you wish. The sample code is in Python, but you will not need to call it from your code.
- You can use external libraries, but do **not** use NLP libraries such as NLTK.
- Be careful about your output. Make sure you remove any debug print statements before submitting.

Assignment Description

Note: The last part is optional but we encourage interested students to give it a try.

Assignment Files

The expected development F-Scores are 0.420, 0.449, and a basic intersection alignment should give 0.485 for the last part.
