R lab - Getting started (part 1)

This lab assignment is *optional* and *does not count* towards your grade. However, if you've never worked with the statistical software package R, this Lab assignment is **essential** to familiarize yourself with the basics of R!

If you're not familiar with R you will need to invest some extra time in the first two optional 'getting started' R labs. Don't get discouraged, it will get easier as you practice more!

After you've completed the optional 'getting started' labs there is one more assignment in this module that *does* count towards your grade. After this first week there is just one lab assignment per week (and no lab assignment in the final week) so the workload gets lighter!

This course uses a third-party tool, R lab - Getting started (part 1), to enhance your learning experience. The tool will reference basic information like your name, email, and Coursera ID.
