The statistical estimation of a mean, fair games

Random sample: $X_1, \ldots, X_n$

Random sample: $X_1, \ldots, X_n$

Sample mean: $S_n/n = (X_1 + \cdots + X_n)/n$

Random sample: $X_1, \ldots, X_n$

Sample mean: $S_n / n = (X_1 + \cdots + X_n)/n$

$$P\left\{ \left| \frac{S_n}{n} - \mu \right| > \epsilon \right\} \to 0 \qquad (n \to \infty).$$

Random sample: $X_1, \ldots, X_n$

Sample mean: $S_n / n = (X_1 + \cdots + X_n) / n$

$$\mathbf{P} \left\{ \left| \frac{S_n}{n} - \mu \right| > \epsilon \right\} \to 0 \qquad (n \to \infty).$$

Slogan
The sample mean is approximately equal to the true mean (with high probability).

Random sample: $X_1, \ldots, X_n$

Sample mean: $S_n/n = (X_1 + \cdots + X_n)/n$

$$\mathbf{P}\left\{\left|\frac{S_n}{n} - \mu\right| > \epsilon\right\} \to 0 \qquad (n \to \infty).$$

Slogan
The sample mean is approximately equal to the true mean (with high probability).

The law of large numbers tells us that the sample mean provides a principled estimate of an underlying unknown true mean (or expectation).

* The estimation of a mean

Random sample: $X_1, \ldots, X_n$

Sample mean: $S_n / n = (X_1 + \cdots + X_n) / n$

$$\mathbf{P}\left\{\left|\frac{S_n}{n} - \mu\right| > \epsilon\right\} \to 0 \qquad (n \to \infty).$$

Slogan
The sample mean is approximately equal to the true mean (with high probability).

The law of large numbers tells us that the sample mean provides a principled estimate of an underlying unknown true mean (or expectation).
