Hi selma,

First, shut down your H2O cluster using the `h2o.shutdown()` command (in Python or R), or kill the Java process d[...] new version.

You have three options:

1. Upgrade both to the latest version. (redo this process in your case - make sure you also have the required packa[...]

```
# The following command removes the H2O module for Python.
[sudo] pip uninstall h2o
# Next, use pip to install this version of the H2O Python module.
[sudo] pip install http://h2o-release.s3.amazonaws.com/h2o/rel-turchin/6/Python/h2o-3.8.2.6-
```

(you could also try 2 or 3 if you don't want to do 1)

2. Upgrade the client package for H2O to the same version the server is running.

3. Upgrade the server version of H2O to the same version the client is running.

To install a new version of H2O, go here to download the latest stable version of H2O. Select the appropriate tab fo[...] commands to install the latest stable version of H2O.

cheers,
