r occurrences of pattern. The output, k, indicates the
str. If pattern is not found strfind returns an empty
e sensitive search.

f type double.

array of vectors of type double.

collapse all

he pattern string';

found in S.

n, is not found in S, k is an empty array.

     41

 in the string S.

s:

```
ichuck chuck';
 wood?'};
```

nces of wood.

3 in the first string and at indices 6 and 28 in the second string.

collapse all

cell array of strings.

collapse all

s an array. If `pattern` is not found, then `k` is an empty array, `[]`.

ndicating the index of each occurrence of `pattern`.

ray with each element being an array of type `double` corresponding
ern in the corresponding element of `str`.

collapse all

ern of empty strings, `' '`, within `str`.
