TS Response object from URL?

Troy Smallwood Week 3 · 20 days ago

I am really stumped here. I construct my URL, which works fine when I try it in my browser. But I cannot get the data from the cached files. This is the message I get:

```
1   found in page-specific cache
2   <A Response object for the following request: http://tastedive.com/api
        /similar?type=movie&q=black+panther&limit=5>
3   http://tastedive.com/api/similar?type=movie&q=black+panther&limit=5
```

```
1   def get_movies_from_tastedive(title):
2       parameters = {"type": "movie", "q" : title, "limit" : 5}
3       myPage = requests_with_caching.get("http://tastedive.com/api/similar"
            ,params = parameters)
```

Hello! Does it work if you search for a movie that is not Black Panther?

Actually I think I got it. I changed "movie" to "movies. this helped. What I am getting looks like a dictionary although the API says it is json. Anyway, I will continue tomorrow.

I should also mention that myPage.text also does not work
