Module 4 Assignment
Graded Assignment • 20 min

Due Oct 26, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

Next item

1. In the Linear Threshold model, how does a node determine whether to adopt a behavior? 1 / 1 point

Nice work

2. Which of the following real-world scenarios would be best modeled with the Linear Threshold Model? 1 / 1 point

Nice work

3. Which of the following real-world scenarios would be best modeled by the SIR model? 1 / 1 point

Nice work

4. In the SIS model, what is the assumption about node recovery? 1 / 1 point

Nice work

5. Which of the following real-world scenarios would be best modeled by the independent cascade model? 1 / 1 point

Nice work

6. In the Independent Cascade model, what happens when a node becomes infected? 1 / 1 point

Nice work

7. In the SIR model, what will eventually happen after allowing enough iterations? 1 / 1 point

Nice work

8. What does the threshold of each node represent in the *special case* of the Linear Threshold covered in this module? 1 / 1 point

Nice work

9. Which of the following real-world scenarios would be best modeled by the SIS model? 1 / 1 point

Nice work

10. How does the SIR model differ from the SIS model? 1 / 1 point

Nice work
