Knowledge Check: Named Entities and Named Entity Recognition
Practice Assignment • 10 min

Due Oct 19, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

Next item

1. What are *named entities* in text? 1 / 1 point

- Words that frequently appear in bold font
- Sequences of words that are names from predefined categories
- Abstract ideas expressed in poetic form
- Any sequence of words in quotation marks

Nice work

Correct! Named entities are sequences of words representing names from a set of predefined categories.

2. Why does capitalization not always help in identifying named entities? 1 / 1 point

- Because capitalized words are always ignored by NER tools
- Because capitalization varies across domains and not all entities are capitalized
- Because machine learning models do not process capitalization
- Because capitalization is illegal in some documents

Nice work

Correct! Some entities, such as disease names or test names in healthcare, may not be capitalized.

3. What two tasks are involved in named entity recognition? 1 / 1 point

- Formatting and editing
- Tokenization and summarization
- Recognition and classification
- Indexing and topic modeling

Nice work

Correct! NER involves recognizing named entities in text and classifying them into predefined categories.

4. Which of the following is a use case for named entity recognition? 1 / 1 point

- Detecting grammatical errors
- Translating text into multiple languages
- Question answering systems
- Generating new content from scratch

Nice work

Correct! NER can support question answering by identifying relevant entities in text.

5. Which type of named entity is *prostate cancer screening* an example of? 1 / 1 point

- Name of a role
- Name of a city
- Name of a test or screening (healthcare-related named entity)
- Name of a person

Nice work

Correct! "Prostate cancer screening" is an example of a named entity representing a test or screening.
