Knowledge Check: What Are Transformers?
Practice Assignment • 10 min

Due Oct 28, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

Next item

1. How are Transformers typically trained? 1 / 1 point

- By fine-tuning without any initial pre-training
- Using handcrafted rules
- Only on labeled datasets
- Using large-scale self-supervised training on massive text corpora

Nice work

Correct! Transformers are trained on large corpora in a self-supervised way.

2. What is an example of a zero-shot application of Transformers? 1 / 1 point

- Classifying sentences without additional fine-tuning
- Summarizing labeled datasets only
- Using pre-trained weights to enhance GPU speed
- Translating fixed templates only

Nice work

Correct! Zero-shot classification uses the model without further fine-tuning.

3. What is the purpose of the attention layer in a Transformer? 1 / 1 point

- To shuffle the order of input tokens
- To remove punctuation from text
- To selectively weight or mask input tokens based on their importance
- To convert text to speech

Nice work

Correct! The attention layer highlights which tokens should receive more or less attention.

4. Which of the following are applications of Transformer models mentioned in this video? 1 / 1 point

- [x] Auto transcribing doctor-patient interactions

Nice work

Correct! Auto transcription is an application of Transformers.

- [ ] Predicting the weather
- [x] Conversational AI

Nice work

Correct! Conversational AI is a key application area.

- [ ] Stock market forecasting

5. Which two main stages make up the Transformer architecture? 1 / 1 point

- Embedding and regularization
- Encoder and decoder
- Input cleaning and tokenization
- Decoding and visualization

Nice work

Correct! Transformers consist of encoder and decoder stages.
