1. What type of information is easiest to extract using regular expressions? 1 / 1 point

- Abstract concepts like emotions
- Unstructured narratives
- Formatted fields like phone numbers and email addresses
- Thematic topics from essays

Nice work

Correct! Formatted fields follow specific patterns and are ideal for extraction with regular expressions.

2. Which of the following is a drawback of using lists and gazettes? 1 / 1 point

- They can only be used in web pages
- They require machine learning to function
- They are prone to typos and polysemic word errors
- They cannot be combined with regular expressions

Nice work

Correct! Typos and polysemic words can cause errors in lookup-based extraction.

3. Why are formatted fields one of the easiest types of text to extract? 1 / 1 point

- They follow predictable patterns or templates
- They always appear at the beginning of documents
- They are manually labeled in every text
- They are always enclosed in quotation marks

Nice work

Correct! Predictable patterns make formatted fields well-suited for regular expressions.

4. When writing a regular expression to match an email address, which character typically separates the username from the domain? 1 / 1 point

- Comma
- Colon
- At symbol (@)
- Hyphen

Nice work

Correct! The at symbol (@) separates the username from the domain in email addresses.

5. Which of the following could be used as a list for lookup-based extraction? 1 / 1 point

- A set of common adjectives
- Random sequence of words
- Names of UN agencies
- Verb conjugation patterns

Nice work

Correct! A list of UN agencies is an ideal candidate for lookup-based extraction.

6. What is the purpose of using lists and gazettes in lookup-based extraction? 1 / 1 point

- To correct grammatical errors
- To improve text formatting
- To tokenize the text into sentences
- To identify fields with known or expected values

Nice work

Correct! Lookup-based extraction uses lists and gazettes to find known entities.

7. Which of the following is a common drawback of using regular expressions? 1 / 1 point

- They can be hard to maintain if formats change
- They are too slow for any extraction task
- They can't extract formatted fields
- They cannot be written for structured data

Nice work

Correct! Regular expressions require updates if formats change even slightly.
