Module 3 Assignment
Graded Assignment • 30 min

Due Oct 23, 11:59 PM IST

Your grade: 100%

Your latest: **100%** • Your highest: **100%** • To pass you need at least 80%. We keep your highest score.

Next item →

1. What is true about the giant component in an Erdős-Rényi graph? 1 / 1 point

Nice work

2. In the Configuration model, how is the degree distribution of nodes specified? 1 / 1 point

Nice work

3. What is the difference between the Stochastic Block Model and the Configuration Model? 1 / 1 point

Nice work

4. Which of the following is true about the Stochastic Block Model (SBM)? 1 / 1 point

Nice work

5. Which of the following networks would be most appropriate to generate using the Stochastic Block Model? 1 / 1 point

Nice work

6. Why would the Adjusted Rand Index (ARI) score for detecting communities in a Stochastic Block Model approach zero as the probability of inter-community edges increases? 1 / 1 point

Nice work

7. In an Erdős-Rényi graph, as the probability p of connecting a pair of nodes increases, which of the following is most likely to happen? 1 / 1 point

Nice work

8. Which of the following real-world networks is best modeled by an Erdős-Rényi random graph? 1 / 1 point

Nice work

9. The density of a network is the number of edges divided by the number of possible edges in the network. What does the graph density in an Erdős-Rényi model depend on? 1 / 1 point

Nice work

10. Which of the following real-world networks is best modeled using the configuration model random graph? 1 / 1 point

Nice work
